

Royal Grass®

Royal Grass®

...enjoy the easy life

Mowing the lawn? Trimming the edges? Let's be frank, there are more enjoyable things to do with your free time. With Royal Grass®, you will have more time to enjoy those things. With no effort, your grass will always look perfectly mown or tended. Even better; Royal Grass® doesn't need a drop of water, no matter how hot or dry it is. Which means you can enjoy a beautiful lawn with minimum maintenance.

The advantages

- *Royal Grass® approaches top quality and has established itself as a leading and trend setting international artificial grass brand for landscaping.*
- *A beautiful green lawn at all times - without water, fertilisers and mowing of lawns.*
- *A lawn that is stronger than ordinary grass and it can withstand intensive use without developing bald patches or brown spots.*
- *You can install artificial turf where normal grass will not grow, whether in the shade, under a roof or even on a balcony or roof terrace.*
- *Royal Grass® feels wonderfully soft to the touch and has a guaranteed long life span, as well as an 9-year warranty on UV-stability and colour fastness.*

Royal Grass® ...for today's lifestyle!

The Innovation...

Artificial grass has received considerable attention in recent years. This is due to the use of artificial turf on football fields. The type of artificial grass designed for sports and for residential gardens are sometimes mistakenly confused as these two products differ considerably.

Royal Grass® specifically designs the most natural looking grass for landscape uses like gardens and roof terraces. That is why we recommend obtaining good advice on and familiarising yourself with the different types of artificial grass available, so that you can be sure to choose the type that best meets your specific needs and circumstances.

Our website contains detailed information on the various types of Royal Grass® that we recommend for gardens and roof terraces. For personal product advice, please do not hesitate to contact your local distributors, who will be happy to answer your questions.

Royal Grass®

...the safe artificial grass

The fibres from TenCate used for the production of Royal Grass® have been investigated according to the stringent German standard DIN 18035-7 in a testing scheme in which all applied polymer compositions and colors were represented. This means that no lead, cadmium, chromium total, copper, mercury, zinc or tin above the strict minimum limits are measured for leaching out into the groundwater.

Furthermore, a qualitative health risk analysis was conducted in 2005 by Dutch organisation TNO (organisation for Applied Scientific Research) to establish the possible dangers related to the use of Royal Grass®. The following exposure situations were covered:

- *Inhalation of substances released at high outdoor temperatures (max 50 degrees C°).*
- *Inhalation of substances released in a fire.*
- *Eye contact with fibres.*
- *Drinking water containing leached materials from Royal Grass® fibres and backing.*
- *Contact between damaged skin and fibres.*
- *Swallowing / sucking on Royal Grass® fibres.*

The conclusions based on the qualitative risk assessment of Royal Grass® products confirm that they are safe for use in all recommended applications.

Responsibility...

Royal Grass® is produced entirely from environmentally-friendly materials, so you and your family can relax and feel safe!

Royal Grass®

...the unique grass profile

Since its foundation in 2003, Royal Grass® has become the market leader in innovative artificial grass, with products available more than 46 countries worldwide. Millions of people are enjoying the benefits of our artificial grass in their gardens, balconies, roof terraces, local parks and playgrounds.

V-SHAPE FIBER

When handling synthetic grass, look up close! The fibre blade used for Royal Grass® mimics nature. As with natural grass, the fibre has a V-shaped structure. A robust core, the 'backbone' of the fibre, makes sure the blades stay as upright as possible. The result is incredibly realistic-looking grass.

This shape is a patented property of Royal Grass® and all products in our range feature this unique fibre. The V-shape combines decorative value with a natural appearance.

Royal Grass® ...just like the real thing!

Royal Grass®

...the MiNT®-technology

As we are continuously striving to improve our grass and research possibilities for better performance and more natural looks, we looked even closer to natural grass than anybody ever did before. We noticed the microscopic nerves on natural grass blade. The micro nerve technology (MiNT®) results in a fibre which not only has great resilience and less shiny grass look, it also has the best natural looks and soft feel at the same time.

Production

Royal Grass® is produced in the Netherlands using exclusive fibres made for Royal Grass® in accordance with meticulous and strictly supervised quality standards. Royal Grass® is a patented and protected trademark, producing various types of high-quality artificial grass with a superior origin designed specifically for private gardens, public landscaping and playgrounds.

Warranty

Royal Grass® guarantees a long lasting, beautiful lawn. Thanks to our history and experience, we provide a guarantee of 9-years UV stability and colour fastness warranty and a life expectancy of more than 15 years.

Laying

Laying of Royal Grass® requires professional skill, just as with paving and brickwork. Points that must be taken in consideration include the type of surface, weather conditions and the effect of weather on the grass. As with carpet laying, cutting the material to fit and seaming the joins require skill and experience. Naturally, the difficulty of the installation depends on the type of artificial grass chosen and the garden layout. For these reasons, it is often best to leave the installation to the professionals to ensure the best possible result.

Royal Grass®

...the choice is yours

Artificial grass with thatch

A long blade of grass requires support. This can be provided by adding a layer of frizzy fibre integrated into the bottom of the grass cover, called 'thatch' or 'rootzone'. These frizzy fibres, which are usually light coloured, give the appearance of parched grass or moss in the grass. These grass types can be used for all indoor and outdoor applications like roof terraces or balconies where sand filler is not appropriate.

Artificial grass with thatch can also be installed with a thin layer of sand if desired. This increases the life span and stability of the product. With this type of grass, the sand filler is covered by the fizzy fibre and concealed.

Royal Grass® Deluxe

- Beautiful manicured grass look
- 36mm tall grass blades
- Fitted with supportive root zone
- 3 shades of green for natural look
- Full grassy density and resilient

- *Royal Grass® has the most natural appearance and feels like real grass.*
- *Royal Grass® comes with an UV stability and colour fastness warranty.*

Royal Grass®...your ultimate choice!

Maintenance

Royal Grass® will give you many years of enjoyment with minimum maintenance. Here are some simple maintenance tips to keep the grass looking its best.

Tips

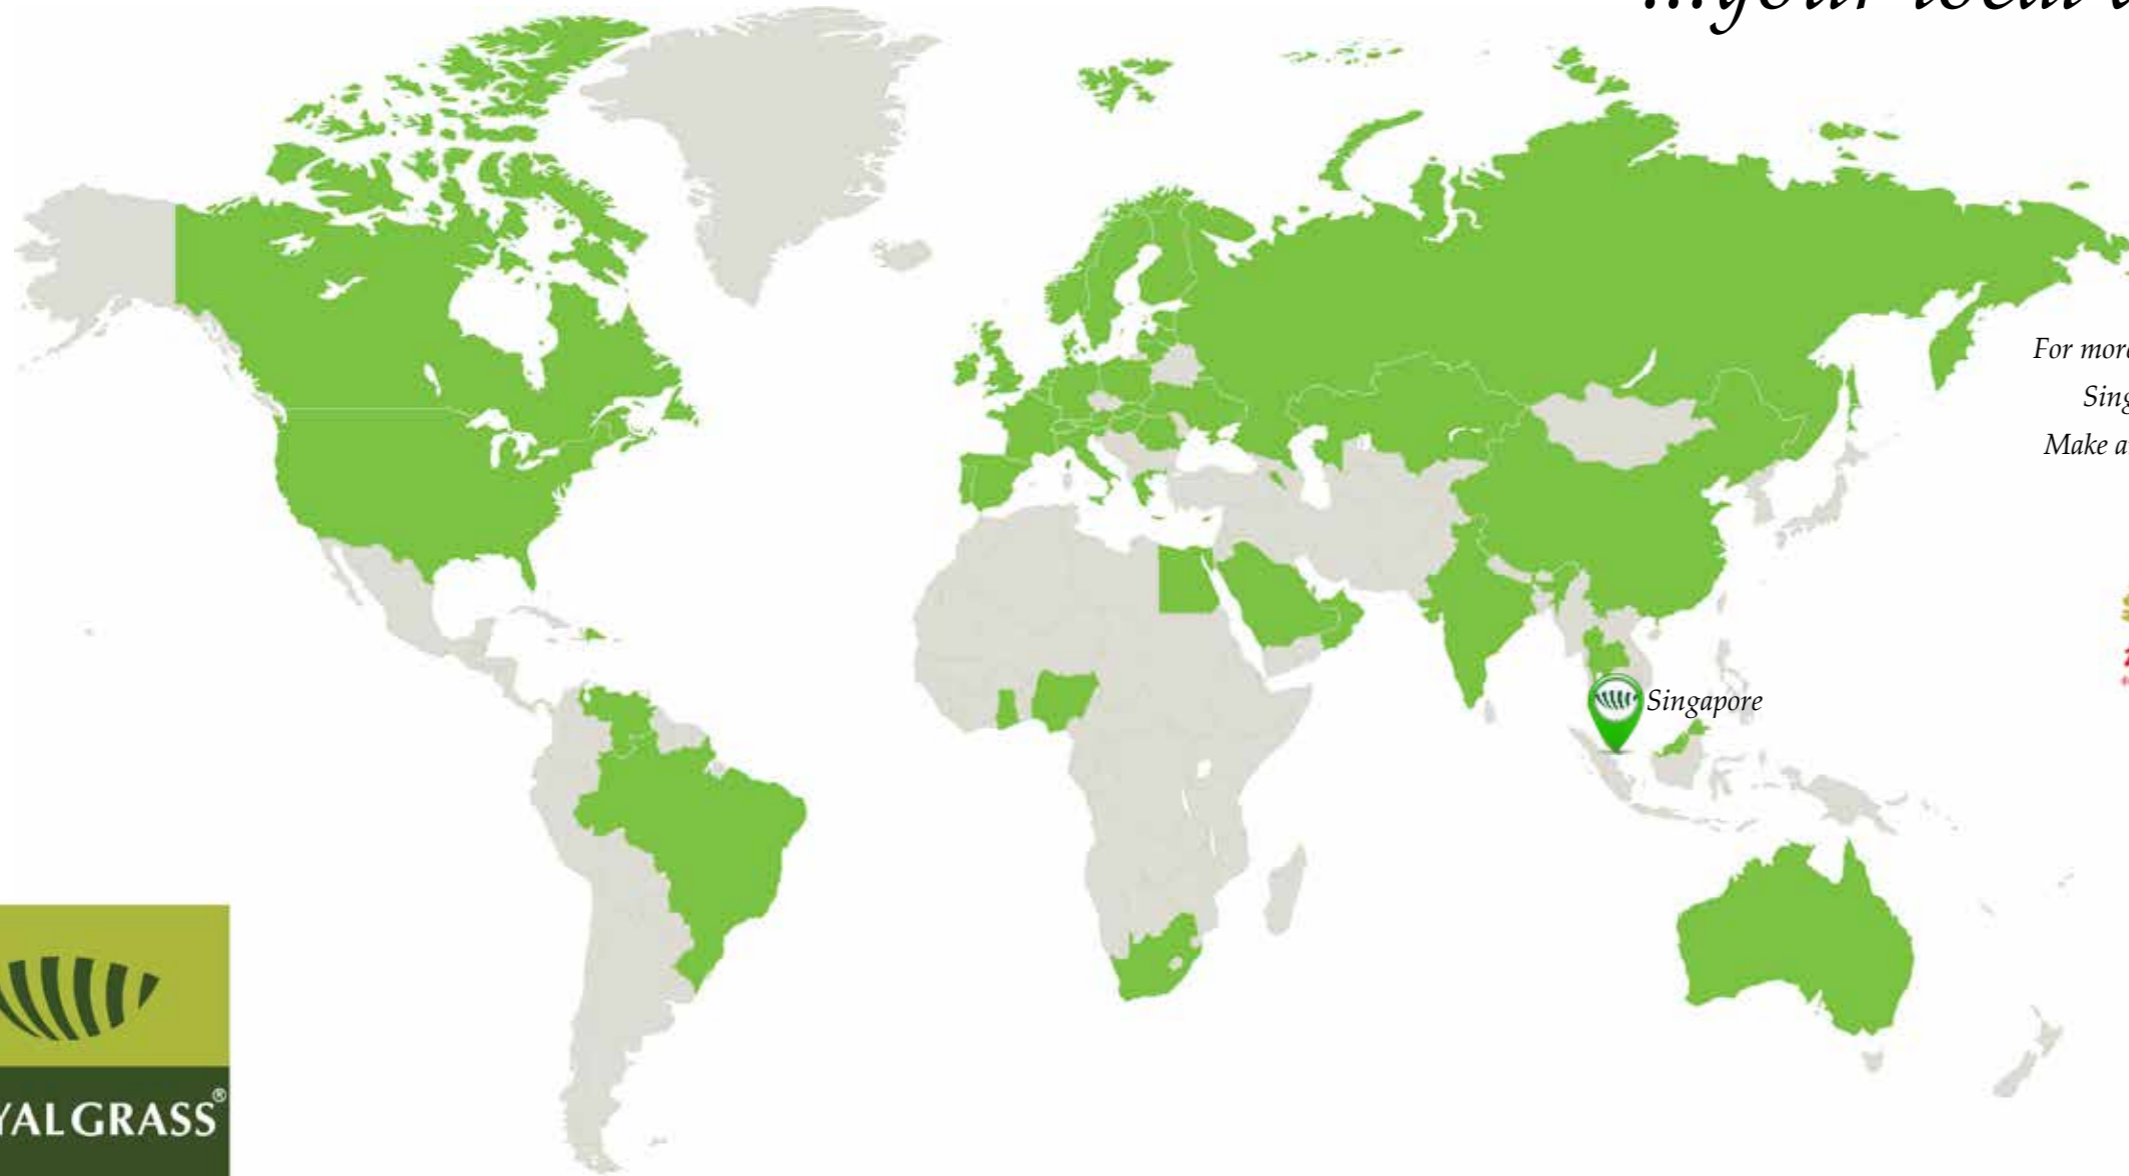

- Keep the grass free of debris and leaves.
- Remove leaves using a leaf blower or rake.
- Remove any weeds immediately to prevent seed dispersal.
- Use clean water to rinse off any spills, such as from liquids like soda or melted ice cream.
- Brush the grass regularly using a hard broom.
- Pet excrement or smells can be removed using a shovel or detergent and water.
- Avoid contact with hot materials (or close proximity to glass structures) to prevent shrinkage of the grass fibres.

More information and frequently asked questions on maintenance can be found on our website.
